

# WTS DELIVERING PURELINE CHLORINE DIOXIDE DISINFECTION PRODUCTS TO AUSTRALASIA

WTS distributing PureMax™ chlorine dioxide water disinfection technology from a world-leading American manufacturer

9<sup>th</sup> of December 2021

## HIGHLIGHTS:

- WTS strategically partners to deliver PureMax™ chlorine dioxide technology.
- PureMax™ is a market leading ClO<sub>2</sub> treatment for water and wastewater.
- WTS and Pureline to leverage each other's technical and regional strengths to deliver superior systems to our customers.

## PureLine

Water Treatment Services (Aust) Pty Ltd (WTS), a wholly Australian owned company, has entered into a distributorship agreement with USA based PureLine to distribute their PureMax™ chlorine dioxide (ClO<sub>2</sub>) water disinfection technology to the Australasian region.

Established in 1995 and headquartered in Illinois, USA, PureLine are recognized as experts in the generation and application of ClO<sub>2</sub> in a diverse range of applications. PureLine's patented and proven high purity ClO<sub>2</sub> generation equipment enhances the safety, reliability, efficiency and cost-effectiveness of the water treatment process. A privately held company with 150 employees, PureLine manufactures all of their products in the USA, ensuring quality and consistency.

*A PureMax™ ClO<sub>2</sub> Generator*

ClO<sub>2</sub> is a strong oxidizing agent with broad biocidal effectiveness and has about 2.5 times the oxidation capacity of chlorine. It is an effective membrane treatment and biocide. PureMax™ is also used to prevent the spread of *Legionella* and other pathogens in cooling and wastewater. It is used extensively in the industrial and municipal sectors. In the food industry, PureMax™ disinfects water used to sanitise equipment and preparation surfaces, wash fruit and vegetables, and prevent *Salmonella* and *E.coli* from contaminating meat and poultry. In Australia ClO<sub>2</sub> is becoming increasingly used in the Power Utilities market due to its ability to reliably control biofilm with significantly reduced corrosion rates compared to primary alternatives.

For over 20 years, WTS has been a trusted water treatment partner to much of Australia's electricity generation sector. By adding PureLine's PureMax™ technology to our range, we look forward to sharing best in class ClO<sub>2</sub> generation technology with clients in sectors such as food and beverage and healthcare to improve their water disinfection processes.
